Hi Heather,

Below is a current statement in regards to hazardous materials relating to the Arlluk (previously the Caroline).

Asbestos and PCB Contamination

Since acquisition of the Arlluk (aka Caroline) in 2009, the USFWS is not aware of any asbestos or PCB's contained within the vessel. Upon acquisition, prior disclosure of these substances was also verified to be absent. The USFWS has not added or modified the vessel in any manner that would contain asbestos or PCB's. Previous disclosures show that all items which may have been contaminated were removed.

Hello Kelly,

I was able to get a copy of the vessel file from when DEA reported the 63' BERTRAM SPORTS FISHER as excess to GSA in 2009. The vessel was named the Caroline at the time. The hazardous materials statement(s) regarding the absence of PCBs and asbestos on the Caroline is attached.

Sincerely,
Heather
